

CLINIC SOFTWARE FOR INDIAN PRACTICES

Ygeia

A token when someone arrives, the doctor's list in order, a GST invoice at the end.

ygeia.in · opens 1 November 2026

Your day is a queue, not a diary.

Appointments matter. They are not the whole day — and software that assumes they are leaves the front desk running a paper register beside it.

ONE LOOP, END TO END

Arrive, be seen, be billed

01

At the desk

The receptionist finds the patient by name, phone or number — or registers them there — and the queue issues today's token.

02

In the room

The doctor opens the visit from that token. Notes, vitals, prescriptions and lab orders all hang off it.

03

On the way out

A GST invoice on your letterhead, numbered per clinic, and the payment against it — UPI, cash or card.

IN EVERY PLAN, INCLUDING THE CHEAPEST

The front desk is not the upsell

- Patient records, searchable by name, phone or number
- Walk-in queue with daily token numbers
- Appointments, with a day, week and month diary
- GST invoices on your own letterhead
- Payments — UPI, cash and card — with a day book
- Clinical notes, typed or dictated
- Prescriptions, with allergy warnings from the record
- Lab reports and scans filed against the patient
- Referral letters under your registration number
- English, Hindi and Malayalam throughout

Withholding the front office would only keep a clinic on paper.

PREMIUM

The consultation writes itself up

Record the visit with the patient's consent. It comes back as a draft in SOAP sections, in the language it was spoken.

Nothing signs itself

The draft is marked AI-generated until a clinician reads it and signs. Unsigned text never reaches the chart.

Consent, every time

One recording needs one consent, read in the patient's language. No consent, no microphone.

The audio expires

Deleted on the schedule you set — 30 days by default. The note survives; the recording does not.

As the practice grows

Your own lab

Take a sample, enter values at the bench, release the result into the record, and print a report on your letterhead.

The medicine counter

Dispense against the prescription, bill what was actually handed over, and take it off the shelf in one step.

More than one location

Branches under one practice, with their own registers and numbering, and figures that add up across them.

Patients who book themselves

A link or QR code they fill in before arriving — capped per day, so walk-in capacity is never sold out from under the desk.

THESE ARE SOMEBODY'S MEDICAL RECORDS

Built like it

Your patients' data stays in India

Records, recordings and notes are processed in Mumbai. Where any step runs outside India, the app names it.

One clinic cannot read another

A request for a record outside your clinic is answered as if it does not exist.

Access follows role

The front desk cannot read clinical notes. Only a doctor or a nurse writes into a chart.

Who opened a chart is answerable

Reads and disclosures are recorded, and an edited note keeps what it said before.

ONE PRICE PER CLINIC, PER MONTH

Whatever your patient volume

Basic

₹499

1 clinician. The whole front office, for one doctor running the desk on software instead of a register.

Standard

₹999

Up to 5 clinicians, online check-in and booking, reports, the waiting-room screen and your price list.

Most clinics start here

Premium

₹1,999

Unlimited clinicians, the ambient scribe, your own lab, the medicine counter and the Android app.

Every plan is free for the first three months. No card to start.

WORTH SAYING OUT LOUD

What we do not claim

No transcription accuracy figure

We have not measured one we would stand behind, and a bad recogniser drops words silently rather than failing loudly. Judge it on your own consultations.

No drug-interaction check

A real one is a licensed clinical database. A hand-made list of famous pairs would let you read “no interactions found” when nothing meaningful was checked.

No WhatsApp or SMS reminders yet

Reminders and recalls go by email today. WhatsApp is built and waiting on Meta’s approval of the wording; SMS has no provider at all.

Open to clinics on 1 November 2026

Three months free on every plan, and no card to start. Write to us and we will set your clinic up on the first day.
